## **What is Farmapram?**

Farmapram is a prescription medication commonly used for conditions such as anxiety, nervous tension, insomnia, and certain muscle spasms. It works by calming the central nervous system, helping patients regain control over stress, anxiety, and sleeplessness. Like other prescription medications, it must be taken under the guidance of a licensed healthcare professional, as misuse can lead to dependency or adverse effects.

Farmapram comes in various dosages to suit individual treatment plans. Licensed healthcare providers carefully evaluate a patient's health history, current medications, and specific needs before determining the appropriate dosage. This personalized approach ensures both effectiveness and safety.
